

A stylized illustration of a rainforest. The background is filled with numerous green trees of varying heights and widths, creating a dense canopy. The ground is covered with brown soil and several green bushes and ferns. The overall style is cartoonish and vibrant.

Layers of the Rainforest

Aim

- I can describe and understand the features of the layers of a rainforest.

Success Criteria

- I can name the four layers of a rainforest.
- I can tell you about the climate in each layer.
- I can tell you about the plants found in each layer.
- I can tell you some animals that live in each layer.

Inside a Rainforest

What do you notice about the plants in a rainforest?

Are all the plants the same height?

Are they all the same shade of green?

Do they have the same kinds of leaves?

Why do you think they are all different?

Layers of the Rainforest

A rainforest has different layers.

Each layer is different because of the amount of light and water it gets.

Layers of the Rainforest

Trees in this layer can be up to 60m tall.

Their trunks can be up to 5m in circumference.

They are usually broad-leaved, evergreen hardwood trees.

Emergent

There is lots of sunlight up here, but it is also very cold and windy.

Many birds, monkeys, bats and butterflies live here.

Layers of the Rainforest

Trees in this layer form a roof over the plants below.

Trees in this layer usually have smooth, oval, pointed leaves.

There is lots of sunlight but also plenty of rain.

Canopy

Many animals live in this layer as there is plenty of food.

These include snakes, toucans and tree frogs.

Layers of the Rainforest

Trees in this layer rarely grow taller than 4m.

It is very warm and very humid here.

Many insects live in this layer.

Understorey

Very little sunlight reaches this area, so the plants have to grow larger leaves to reach the sunlight that there is.

Layers of the Rainforest

It is very dark here – almost no sunlight reaches this area.

Very few plants grow in this area.

Leaves and other debris decompose very quickly.

Forest Floor

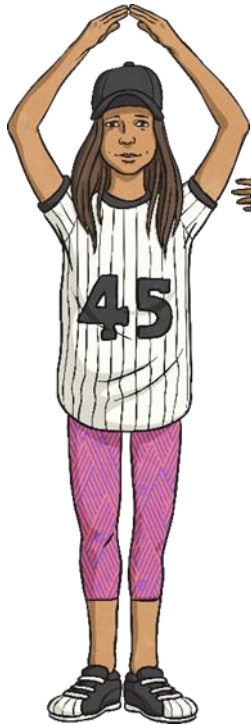

Animals such as gorillas, anteaters, leopards and tigers live here.

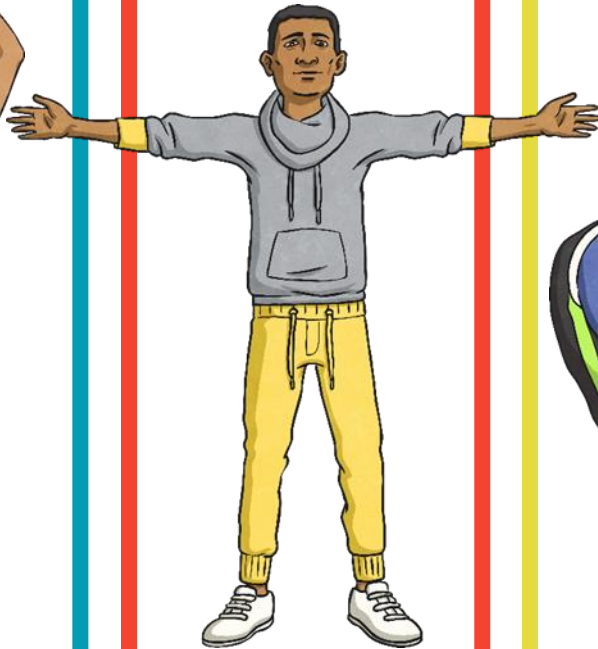

Which Layer?

Listen to the clue. Think about which layer of the rainforest the clue relates to. Show what you think by doing one of the actions.

Emergent –
hands above head

Canopy –
arms out wide

Understorey –
touch your toes

Forest floor –
crouch down low
