

As part of the development of our new science curriculum we have written a "Vision for Science at Chuter Ede" to ensure that we are all aiming for the same goals and aspirations in our science teaching and learning. So far, we have had input from staff and the children and now we would like your input too please. How do you view science at your child's school, do they come home and talk about it, would you like to see any changes? Send us a message and let us know! This is our vision statement so far, which includes quotes from staff and children.

One of the main focuses of our vision for science is to develop an awareness of the possibilities of your children having a future career in science. We're aiming to dispel the myth that science is just done by a man in a white lab coat who works in a laboratory! Careers in science are vast and this is where we would like to ask for your help.

We are planning to hold a whole school Science day on the 14th July where the children will be carrying out investigations, researching a variety of areas of science and getting excited by science! We would also like to use this opportunity to expose your children to a range of careers in science in a meaningful way. We are asking any of you that have a job with links to science if you would like to share it with us. This could be by just emailing a quick sentence or two about what you do (maybe with a photo, but not essential!) creating a quick video clip explaining what your job is and how it relates to science or maybe you'd like to come in during our science day and talk to small groups or classes of children?

We look forward to hearing from you and thank you, in advance, for your support.

Mrs Pennick and Miss Dobson (Science Curriculum Leaders)
